COLOR SYMPHONIES

The pictures from **Laser Inspirations Art Gallery** are products of human imagination expressed through natural phenomena. They reveal a new technique that blends Art with Science. We call it "Liagraphy". We synthesize unique materials that generate unique abstract compositions with a wide palette of colors when interacting with light beams. The molecules of these materials are designed to respond to light. Variety of light sources used for creating the pictures includes lasers, and the technique uses optical systems for forming and controlling the beams. The images are often obtained under microscope using polarization properties of light.

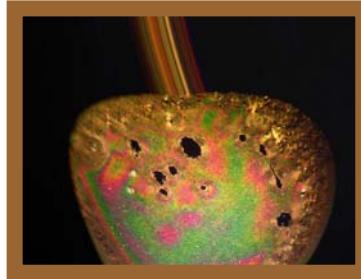

The pictures created with the help of liagraphy continue the traditions of abstract painting of the first half of the 20th century. And in spite of the same technique they are made in quite different styles. Some of the pictures are closer to Paris school and can be called "lyrical abstractions" because of their refined palette and calm dreamy mood. Others look like abstract expressions with open dynamic compositions, impulsive "brush strokes" and bright pure colors. All these "not made by hands" colorful works will perfectly decorate modern interior and enliven its atmosphere with a piece of a nature art.

The pictures from the **Laser Inspirations Art Gallery** are printed on canvas and framed in solid wood to please eye and intrigue mind.
